What is DataRadio ?

- DataRadio is an inbuilt feature in DataMail which is designed to flash one-way information/ communication to the audience.
- It includes both voice and text based social media feature which is available to DataMail users free of cost.
- User can start their own 'DataRadio channels' to amplify information in text or voice format to their fans / listeners/ followers of same interested group.
- This powerful feature in DataMail mobile app for android and ios is based on a push notification methodology where audience will be notified whenever there will be a broadcast message from their tuned channel.
- User will receive notification on home screen in which user can play and pause the voice message from the notification itself or view text on home screen .
